

# Property Types

## Overview

Property types allow the site owner to categorize property types into appropriate sections. Nested property types (sub-property types) are supported in JomEstate. JomEstate comes with a property type named "**UNCATEGORISED**" which is the default setting. This property type will list properties which are not attached to any property type (same function as the default Joomla categories system).

New Category tab

Provide the values as given in the following table.

Title	Title for the Property Type.
Alias	URL alias for “SEF/SEO” URL.
Parent	Choose the parent category item.
Text area	Provide a description in the text area.
Toggle editor <i>Button</i>	Click to toggle between rich text and plain text editor.
Article <i>Button</i>	Click to select a relevant article. If an article is provided, it can be seen under the Details tab in the listing.
Image <i>Button</i>	Click to select an image you want to add to the listing.
Category Image	Currently not being used.

Publishing tab

After you have provided the above information, you can provide the publishing information in the Publishing tab.

You can change the values for the given options using the following table.

<b>Status</b>	Based on the status seen here, the visibility changes as follows: <ul style="list-style-type: none"><li>• Published - Entries are visible on the front-end.</li><li>• Unpublished – Entries are invisible in the front-end, but can be published later.</li><li>• Archived – Older entries that are not ready for deletion yet.</li><li>• Trashed – Older entries that should be removed.</li></ul>
<b>Access</b>	Access level for site users is as follows: <ul style="list-style-type: none"><li>• Public access grant access to everybody.</li><li>• Registered access grants access only to registered and logged in users.</li><li>• Special access only grants access to users specified as “Special”.</li></ul>
<b>Language</b>	Select the language for the property type.
<b>ID</b>	Address ID, which can be used in modules, plugins and menus.
<b>Created by</b>	User name who created the entry.
<b>Created Date</b>	Date when the entry was created.

## Metadata tab

The metadata tab is used to provide metadata information for a particular address entry.

You can change the values for the given options using the following table.

<b>Meta Description</b>	Meta-description for search-engine listings.
<b>Meta Keywords</b>	Meta Keywords for the search-engine
<b>Author</b>	Content author metadata.
<b>Robots</b>	Robots instructions: <ul style="list-style-type: none"><li>• Use Global</li><li>• Index, Follow</li><li>• No Index, Follow</li><li>• Index, No Follow</li><li>• No Index, No Follow</li></ul>
