Resource Custom Fields

Overview

For every listing that is created, you can create custom fields that act as additional resources. For example, if a listing needs to add a resource such as utilities that include TV, Radio, DVD, and so on, this resource can be created using the Objects Custom Fields screen. The following image shows the listing for this field.

Screen 1: Resource Custom Fields listing

For more information about how to create custom fields, see the Custom Fields documentation in the Administrator Guide.
