Install and activate plugin

How to install and activate plugin

Automatic Installation

Automatic installation is the easiest method, as WordPress manages the file transfers for you without needing to leave your web browser. To perform an automatic install, follow these steps:

1. Log in to your WordPress admin panel.
2. Navigate to the Plugins menu and click Add New.
3. In the search field, type “Comdev Downloads” and click Search Plugins.
4. Locate the plugin, review details such as its version, rating, and description.
5. Click Install Now to install the plugin.

Manual Installation

Do you know how to use a Zip file (or archive)? Great! That means you can manually install a WordPress plugin. Here's how:

1. **Download the Plugin:** Go to the plugin page and download the plugin, which will create a Zip file on your computer.
2. **Log into WordPress Admin:** Access your WordPress admin site and navigate to the Plugins section.
3. **Upload the Plugin:** Click on 'Upload' and select the Zip file. WordPress will unpack the contents and place the files in the correct location.
4. **Activate the Plugin:** Activate the plugin within the Plugins section.

5. **Adjust Plugin Settings:** Go back to your WordPress admin menu, scroll down to find the plugin settings, and review the default settings. Make any necessary changes or additions.

Alternatively, you can use an FTP client like CyberDuck or Transmit (a popular choice for Mac users). Both have robust free versions and are favored by WordPress users.

1. **Download the Plugin:** Follow step one above.
2. **Log into FTP Service:** Access your FTP service.
3. **Upload via FTP:** Add the plugin folder to the `wp-content/plugins` directory in your WordPress setup.
4. **Activate the Plugin:** Go into the plugins directory within your WordPress admin to activate the plugin. Depending on your FTP service, you might be able to check the default settings directly; otherwise, log into your WordPress admin and follow step 5 above.

How to Add Your First Download

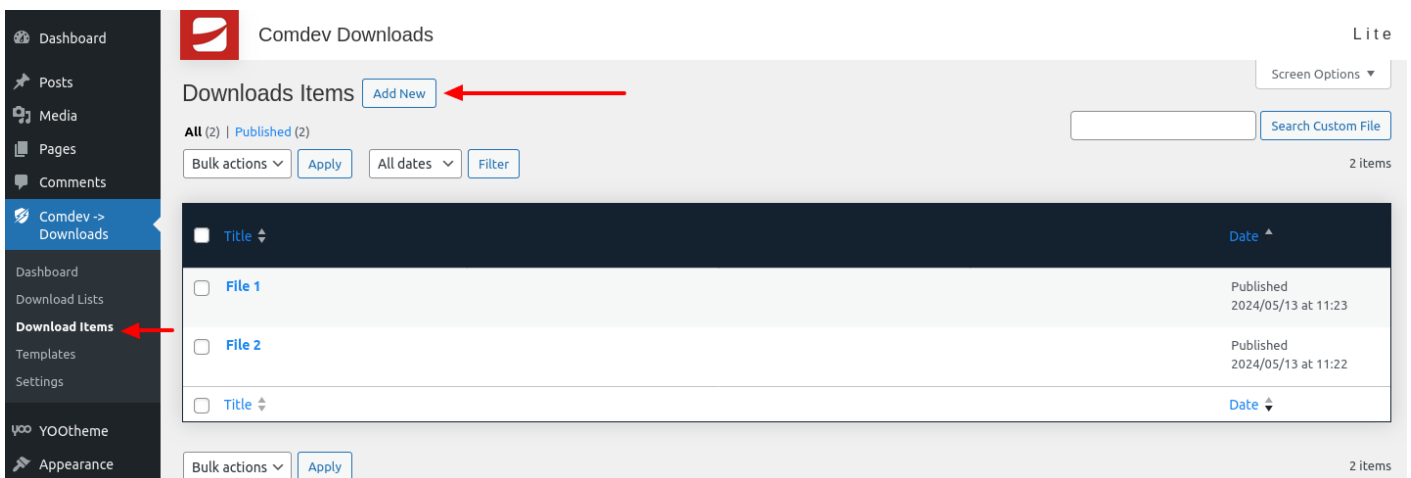

Prerequisites

Before proceeding, ensure that you have:

1. A working WordPress website.
2. Download Monitor plugin installed and activated.

Steps to add your download

First, log into your WordPress admin area. In the Dashboard, locate and click on the Comdev Downloads section. Then, click the **Download Items** menu item than **Add New** button to start adding your first file.

The screenshot shows the WordPress admin dashboard with the Comdev Downloads plugin interface. The sidebar on the left contains the following menu items: Dashboard, Posts, Media, Pages, Comments, Comdev -> Downloads (highlighted), Download Lists, Download Items (highlighted with a red arrow), Templates, Settings, YOOtheme, and Appearance. The main content area displays the 'Comdev Downloads' header with a 'Lite' version indicator. Below the header, there is a 'Downloads Items' section with an 'Add New' button (highlighted with a red arrow). The 'Add New' button is located next to the 'Downloads Items' text. Below this, there are filters for 'All (2)' and 'Published (2)', a 'Bulk actions' dropdown, an 'Apply' button, and a 'Filter' button. A search bar with the placeholder 'Search Custom File' is also present. The main content area shows a table with two columns: 'Title' and 'Date'. The table contains two rows: 'File 1' and 'File 2', both with a 'Published' status and a date of '2024/05/13 at 11:23'. The table has a 'Bulk actions' dropdown and an 'Apply' button at the bottom. The status '2 items' is shown at the bottom right.

Creating a download is quite similar to posting posts and pages. Start by giving your download a name and adding any necessary content. In the Upload File section, you can upload your file below the content area. You can also set the file version; if not specified, it will not be displayed.

Please note that in Comdev Downloads, you need to upload files individually and then create a package with the included files under Download Lists.

Once you are happy with all the settings and options, you can hit the **Publish** button on the right side.

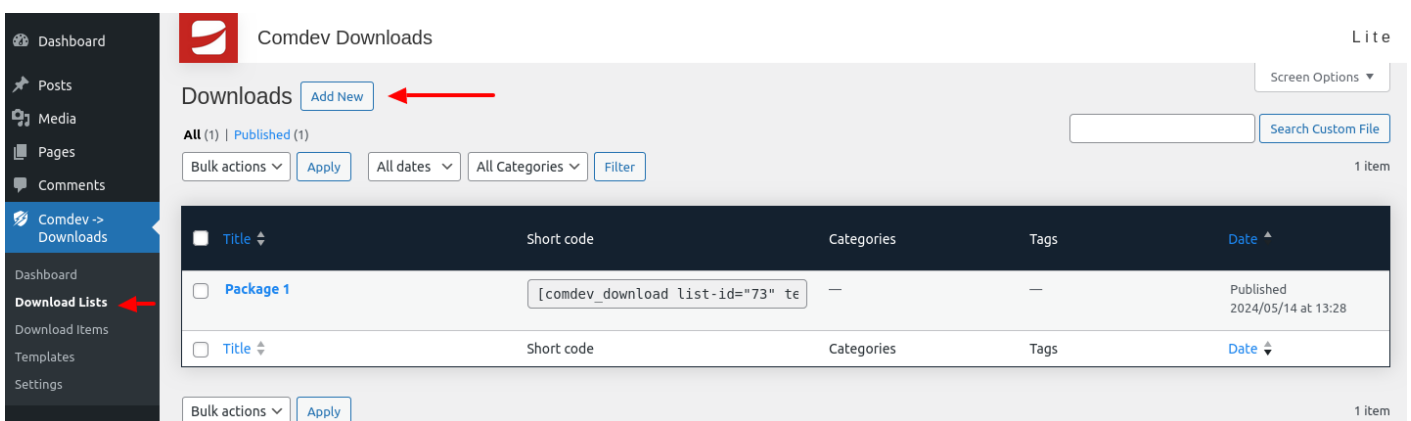

How to Add Your First Download List / Package

Prerequisites

In the previous section, we discussed how to create your first files and publish them. Once that's done, you can create your first download list and publish it on your WordPress website.

Steps to create your download list

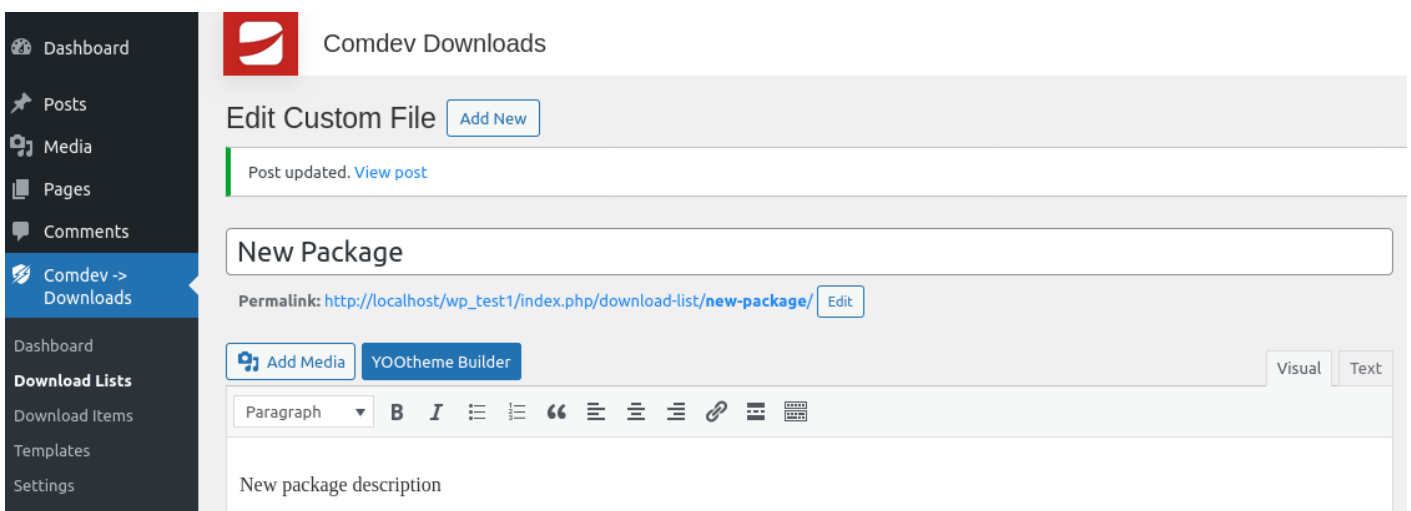

First, log into your WordPress admin area. In the Dashboard, locate and click on the Comdev Downloads section. Then, click the **Download Lists** menu item than **Add New** button to start creating your new download list.

The screenshot shows the WordPress admin dashboard with the Comdev Downloads plugin interface. The left sidebar has a menu with 'Download Lists' highlighted. The main content area shows a table of download lists. A red arrow points to the 'Add New' button in the top right corner of the table.

Title	Short code	Categories	Tags	Date
<input type="checkbox"/> Package 1	[comdev_download list-id="73" te	—	—	Published 2024/05/14 at 13:28
<input type="checkbox"/> Title	Short code	Categories	Tags	Date

Creating a download list is quite similar to posting posts and pages. Start by giving your download a name and adding any necessary content.

The screenshot shows the 'Edit Custom File' screen in the Comdev Downloads plugin. The left sidebar has 'Download Lists' highlighted. The main content area shows a form for creating a new package. A red arrow points to the 'Add New' button in the top right corner of the form.

[Add Media](#) [YOTheme Builder](#) [Visual](#) [Text](#)

Paragraph **B** *I* [List](#) [Link](#) [Quote](#) [Table](#) [Image](#) [Code](#)

New package description

In the **Download List Settings** section, you can attach files created in the Download Items menu to create a File Package. This package can then be published to your blog post or WordPress page using a shortcode generated after the list is published. The files in the package will be displayed using the selected template. You can preview available templates in the Templates menu on the left sidebar.

Download List Settings

Include Files

Search...

Showing 3 of 3 results

File 1	DOWNLOADS ITEMS		+
File 2	DOWNLOADS ITEMS		+
New File	DOWNLOADS ITEMS		+

Include single or multiple files to be added to the download list.

List Template

Default template

Choose the preferred template for download section. Template previews can be seen [here](#)

Finally, when you publish the list, a shortcode will be generated based on all the options for this package. The Publish button is located at the top right side of the page.

The download list must be published, and the files added to the package for the shortcode to appear.

List Shortcode

Shortcode

[comdev_download list-id="78" template-id="1"]

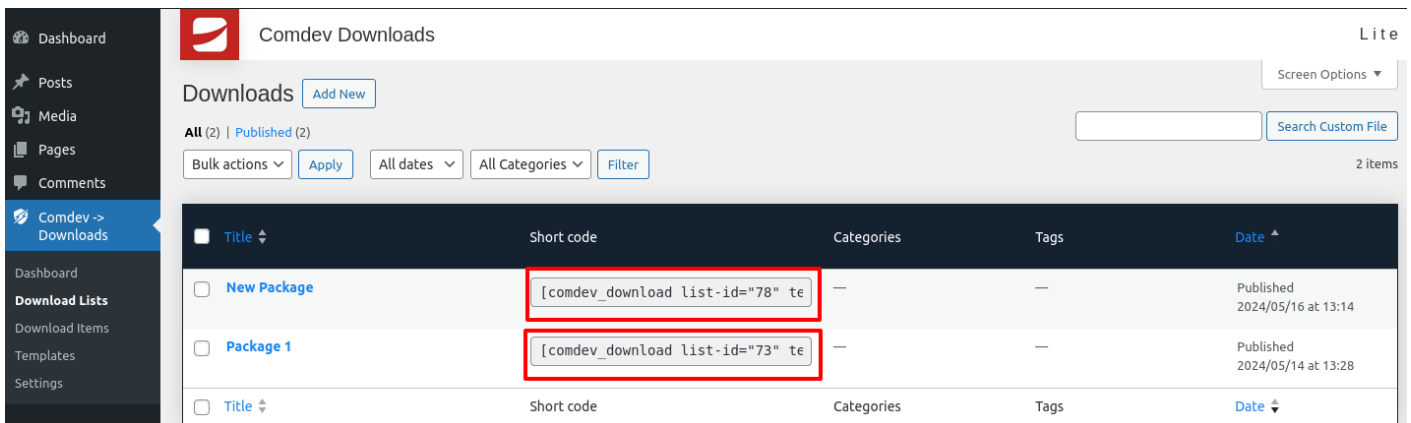

insert into your posts, pages, widgets, or theme files to display download.

COPY

And that's how you create your first downloadable content on your WordPress website!

How to display your first Download List

Displaying your downloads is easier than you might imagine. Simply navigate to the right side and click on the "Download Lists" menu link. Each download list has assigned its own unique shortcode, which can then be used to publish downloads on your website.

The screenshot shows the WordPress dashboard for the 'Comdev Downloads' plugin. The left sidebar contains a menu with 'Comdev -> Downloads' selected. The main content area shows a table of download items. Two items are listed: 'New Package' and 'Package 1'. Their shortcodes are highlighted with red boxes: '[comdev_download list-id="78" te' and '[comdev_download list-id="73" te'.

Title	Short code	Categories	Tags	Date
<input type="checkbox"/> New Package	[comdev_download list-id="78" te	—	—	Published 2024/05/16 at 13:14
<input type="checkbox"/> Package 1	[comdev_download list-id="73" te	—	—	Published 2024/05/14 at 13:28
<input type="checkbox"/> Title	Short code	Categories	Tags	Date

Placing shortcode under Worpdress Page/Post

Grab the generated shortcode by simply copy it. Locate the shortcode block or directly insert the code into the desired post or page to display the link.

The screenshot shows the 'New' post editor in WordPress. A shortcode block is visible, containing the shortcode: `[comdev_download list-id="73" template-id="1"]`.

That's all set! You're now able to offer downloadable content to your website users.
