

How to Add Your First Download List / Package

Prerequisites

In the previous section, we discussed how to create your first files and publish them. Once that's done, you can create your first download list and publish it on your WordPress website.

Steps to create your download list

First, log into your WordPress admin area. In the Dashboard, locate and click on the Comdev Downloads section. Then, click the **Download Lists** menu item than **Add New** button to start creating your new download list.

The screenshot displays the WordPress admin interface for the Comdev Downloads plugin. On the left sidebar, the 'Download Lists' menu item is highlighted with a red arrow. In the main content area, the 'Add New' button is also highlighted with a red arrow. Below the navigation, there is a table of download lists. The table has columns for Title, Short code, Categories, Tags, and Date. One item is listed: 'Package 1' with a short code of '[comdev_download list-id="73" te' and a date of 'Published 2024/05/14 at 13:28'. The table is currently showing 1 item.

Title	Short code	Categories	Tags	Date
Package 1	[comdev_download list-id="73" te	—	—	Published 2024/05/14 at 13:28

Creating a download list is quite similar to posting posts and pages. Start by giving your download a name and adding any necessary content.

Paragraph **B** *I*

New package description

In the **Download List Settings** section, you can attach files created in the Download Items menu to create a File Package. This package can then be published to your blog post or WordPress page using a shortcode generated after the list is published. The files in the package will be displayed using the selected template. You can preview available templates in the Templates menu on the left sidebar.

Download List Settings

Include Files

Search... Showing 3 of 3 results

File 1	DOWNLOADS ITEMS		
File 2	DOWNLOADS ITEMS		
New File	DOWNLOADS ITEMS		

Include single or multiple files to be added to the download list.

List Template

Default template

Choose the preferred template for download section. Template previews can be seen [here](#)

Finally, when you publish the list, a shortcode will be generated based on all the options for this package. The Publish button is located at the top right side of the page.

The download list must be published, and the files added to the package for the shortcode to appear.

List Shortcode ^ v ▲

Shortcode

`[comdev_download list-id="78" template-id="1"]`

insert into your posts, pages, widgets, or theme files to display download.

COPY

And that's how you create your first downloadable content on your WordPress website!
